Introduction

In the 21st century, there are different ways of learning. One of them is through the Internet. This technology is extremely beneficial in that it has a lot of information and materials that the children could understand if they only used it appropriately. However, there are many challenges involving the employment of this technology. These challenges include bullying, plagiarism, cheating, stealing, and sex soliciting among others. In this video, some experts have given their views on the challenges and how to solve them.

To start with, it is clear that the young people are finding it hard to walk to the video shops to buy the videos. Instead, they download them online. Moreover, there are cases that involve children bullying their peers online. This is not right because that shows a lack of respect for the other people. Moreover, it has been realized that the Internet users especially the pupils cheat a lot in their exams. This is because they copy paste the information on their exam papers. This result in turn leads to plagiarism which is a serious crime. Pupils also steal information online. In addition, there are cases of pupils being sexually solicited in the Internet.

To ensure that there is safety in the children’s use of the Internet, the parents take the responsibility of instilling an ethical base on their children; teaching them on what is right and wrong, the appropriate language to be used in the Internet. The schools should also come up with some policies that control the Internet use among the pupils. They should also train staff in these policies and how to carry them out.
There is a need for parents and teachers to realize that the children are in public whenever they are online. Therefore, they should prepare themselves to handle the risks involved by teaching their children on the appropriate way of communicating with their peers. The policies also involve clearly explaining to the pupils the acceptable ways of using the Internet.

Conclusion

The Internet is particularly useful if used ethically. It is essential to teach pupils the appropriate way of using it so that cases of copyrighting, giving out unauthorized information, bullying, cheating, stealing and plagiarism are curbed. Consequently, there will be a peaceful and safe online environment.
